Chicago, IL • (224) 334-1749 • philmantatsky@gmail.com • [LinkedIn](#) • [GitHub](#)

EDUCATION

University of Illinois at Chicago

Expected: May 2028

Bachelor of Science in Computer Science

- GPA: 3.9/4.0
- Activities & Societies: Google Developer Student Club, Alpha Kappa Psi (Professional Business Fraternity), Association for Computing Machinery
- Relevant Coursework: Data Structures, Algorithms, x86-64 Assembly, Computer Architecture, Linear Algebra

PROFESSIONAL EXPERIENCE

Software Engineer Intern

June 2026 – Present

Teradyne (semiconductor test systems) - Deer Park, IL

Full-time: Summer 2026 | Part-time: Fall 2026 – Present

- Built and deployed an internal AI agent (Claude Agent SDK) that triages daily test failures and pinpoints the source location of each defect, saving engineers ~2 hours/day of manual log analysis
- Wrote C++ integration code connecting the agent to Teradyne test-system APIs, enabling automated hardware test execution and structured result parsing
- Designed reusable tool interfaces that expose internal engineering utilities to the agent for multi-step debugging and test workflows

Artificial Intelligence Research Intern

June 2025 – August 2025

University of Illinois Chicago

- Evaluated outputs from multiple large language models on a curated Hugging Face dataset of 3,000+ math problems, assessing answer accuracy, reasoning steps, and error patterns
- Developed Python pipelines to automate prompt execution, model output collection, and accuracy benchmarking for quantitative performance analysis
- Identified recurring reasoning-error patterns across multiple LLMs and translated them into prompting-strategy changes that improved answer accuracy by ~40% over the baseline

PERSONAL PROJECTS

Real-Time Trading Card Recognizer (Pokémon TCG)

May 2026 – Present

- Fine-tuning a pretrained vision model (TensorFlow / NVIDIA TAO Toolkit) on a custom dataset of 20,700 card images to identify cards from a live camera feed
- Optimizing GPU inference with TensorRT INT8 quantization for low-latency real-time detection; integrating a market-data REST API to surface card pricing and population data

Kalshi-Vegas Arbitrage Bot

May 2026

AI Forecasting Hackathon (UChicago)

- Built an automated arbitrage bot (Python) that compares 1,200+ Kalshi prediction-market contracts against live Vegas odds and places paper trades if prices diverge by more than 3% across NBA, MLB, and NHL
- Deployed it as an always-on worker on Fly.io and ran live for 14 days (~40 paper trades), with an LLM fallback that estimated probabilities from ESPN data when the odds API quota ran low

SKILLS & INTERESTS

Languages and Tools: Python, C++, Java, C, Swift, TypeScript, JavaScript, Docker, Kubernetes, Linux, Bash, Git
AI/ML: PyTorch, TensorFlow, NVIDIA TAO Toolkit, TensorRT, Claude Agent SDK

Personal Interests: Wrestling, UFC, *Super Smash Bros*, *Attack on Titan*, *Clash Royale*, Fishing, Pickleball

Spoken Languages: Russian (Fluent), Lithuanian (Fluent), English (Native)
