EDUCATION

University of Illinois at Chicago Expected: May 2028

Bachelor of Science in Computer Science

- GPA: 3.9/4.0
- Activities & Societies: Google Developer Student Club, ACM, Alpha Kappa Psi (business fraternity)
- Relevant Coursework: Machine Organization (x86-64 Assembly), Data Structures, Applied Statistics
  Fall 2026: Systems Programming, Software Design, Programming Language Concepts

PROFESSIONAL EXPERIENCE

Software Engineer Intern **Deer Park, IL**

Teradyne (semiconductor test systems) *June 2026 – Present*

Full-time: Summer 2026 | Part-time: Fall 2026 – Present

- Automated execution and result parsing for 500+ hardware tests/day across physical test benches by writing C++/C# integrations against Teradyne test-system APIs, with continuous pass/fail health monitoring
- Saved engineers ~2 hours/day of manual log analysis by building and deploying an agentic workflow (Claude Agent SDK + MCP) that ingests test-failure telemetry and traces each failure to its root cause
- Enabled multi-step debugging and regression workflows for the test-engineering team by designing reusable tool interfaces over internal utilities; shipped through code review with senior engineers
- Owned the project end-to-end and drove adoption of the agentic workflow by the QA team, who now run it for daily test health triage and maintain it: packaged it as a self-serve Claude Code skill and demoed to management

Artificial Intelligence Research Intern **Chicago, IL**

University of Illinois Chicago *June 2025 – August 2025*

- Automated LLM benchmarking on a 3,000+ problem Hugging Face math dataset by building Python evaluation pipelines for prompt execution, output collection, and accuracy scoring
- Raised model answer accuracy ~40% over baseline by identifying recurring reasoning-error patterns and translating them into prompt-engineering changes

PERSONAL PROJECTS

Real-Time Computer Vision Card Recognizer (NVIDIA TAO / TensorRT) *May 2026 – August 2026*

- Fine-tuned a pretrained vision model (PyTorch / NVIDIA TAO Toolkit) on a 24,000-image card dataset assembled from a public TCG image repository to identify 20,000+ cards from a live camera feed
- Cut inference latency to ~8 ms/card on a consumer GTX 1660 Super by quantizing the model to INT8 with TensorRT; built the end-to-end Python pipeline from camera capture to a market-data REST API with live pricing

VGC Pokémon Showdown AI *May 2026 – Present*

- Built an AI that plays competitive Pokémon against real people online using a Transformer-based PyTorch model trained on 14,000 top-player games; achieved a 55% win rate in its first 100 ranked matches
- Added future-move simulation and opponent prediction; validated new versions through 25,000 test battles, a pytest suite of 519 tests, and GitHub Actions CI on every code change

SKILLS & INTERESTS

Languages and Tools: Python, C++, C#, Java, TypeScript, Linux, Git, Docker, Bash, React, REST APIs, SQL
AI/ML: PyTorch, TensorFlow, TensorRT, LLM evaluation, Claude Agent SDK, MCP, Claude Code, GitHub Copilot
Personal Interests: Pokémon, Wrestling, UFC, Super Smash Bros, Attack on Titan, Clash Royale, Fishing, Pickleball
Spoken Languages: Russian (Fluent), Lithuanian (Fluent), English (Native)
